

Contents

Preface to the Second Edition.....	v
Preface to the First Edition.....	vii
Chapter 1 Introduction	1
1.1 Cost Modeling	1
1.2 The Product Life Cycle.....	4
1.3 Life-Cycle Cost Scope	7
1.4 Cost Modeling Definitions.....	8
1.5 Cost Modeling for Electronic Systems	11
1.6 The Organization of this Book.....	12
References	12
Part I Manufacturing Cost Modeling.....	15
1.1 Classification of Products Based on Manufacturing Cost	17
References	18
Chapter 2 Process-Flow Analysis	19
2.1 Process Steps and Process Flows.....	19
2.1.1 Process-Step Sequence.....	21
2.1.2 Process-Step Inputs and Outputs.....	21
2.2 Process-Step Calculations.....	22
2.2.1 Labor Costs	23
2.2.2 Materials Costs.....	24
2.2.3 Tooling Costs	24
2.2.4 Equipment/Capital Costs.....	25
2.2.5 Total Cost.....	25
2.2.6 Capacity	26
2.3 Process-Flow Examples.....	27
2.3.1 Simple Pick & Place and Reflow Process	28
2.3.2 Multi-Step Process-Flow Example.....	29
2.4 Technical Cost Modeling (TCM).....	31
2.5 Comments	32

References	32
Problems	33
Chapter 3 Yield	35
3.1 Defects	36
3.2 Yield Prediction	37
3.2.1 The Poisson Approximation to the Binomial Distribution.....	39
3.2.2 The Poisson Yield Model.....	42
3.2.3 The Murphy Yield Model	43
3.2.4 Other Yield Models.....	44
3.3 Accumulated Yield	46
3.3.1 Multi-Step Process-Flow Example.....	47
3.3.2 The Known Good Die (KGD) Problem	48
3.4 Yielded Cost	50
3.5 The Relationship Between Yield and Producibility	54
References	56
Bibliography	56
Problems	57
Chapter 4 Equipment/Facilities Cost of Ownership (COO)	61
4.1 The Cost of Ownership Algorithm	62
4.2 Cost of Ownership Modeling.....	64
4.2.1 Capital Costs	64
4.2.2 Sustainment Costs	64
4.2.3 Performance Costs	66
4.3 Using COO to Compare Two Machines	67
4.4 Estimating Product Costs.....	71
References	72
Bibliography	73
Problems	73
Chapter 5 Activity-Based Costing (ABC)	77
5.1 The Activity-Based Cost Modeling Concept	78
5.1.1 Applicability of ABC to Cost Modeling	79
5.2 Formulation of Activity-Based Cost Models	79
5.2.1 Traditional Cost Accounting (TCA)	80
5.2.2 Activity-Based Costing	80
5.3 Activity-Based Cost Model Example	82
5.4 Time-Driven Activity-Based Costing (TDABC).....	84

5.5 Summary and Discussion.....	87
References	87
Bibliography	88
Problems	88
Chapter 6 Parametric Cost Modeling.....	93
6.1 Cost Estimating Relationships (CERs)	94
6.1.1 Developing CERs.....	96
6.2 A Simple Parametric Cost Modeling Example	97
6.3 Limitations of CERs	100
6.3.1 Bounds of the Data.....	100
6.3.2 Scope of the Data	101
6.3.3 Overfitting.....	101
6.3.4 Don't Force a Correlation When One Does Not Exist	103
6.3.5 Historical Data	103
6.4 Other Parametric Cost Modeling/Estimation Approaches	104
6.4.1 Feature-Based Costing (FBC).....	104
6.4.2 Neural Network Based Cost Estimation.....	105
6.4.3 Costing by Analogy	106
6.5 Summary and Discussion.....	106
References	107
Bibliography	108
Problems	109
Chapter 7 Test Economics	113
7.1 Defects and Faults.....	114
7.1.1 Relating Defects to Faults	115
7.2 Defect and Fault Coverage	120
7.3 Relating Fault Coverage to Yield	122
7.3.1 A Tempting (but Incorrect) Derivation of Outgoing Yield	122
7.3.2 A Correct Interpretation of Fault Coverage	123
7.3.3 A Derivation of Outgoing Yield (Y_{out})	124
7.3.4 An Alternative Outgoing Yield Formulation	129
7.4 A Test Step Process Model	129
7.4.1 Test Escapes.....	132
7.4.2 Defects Introduced by Test Steps.....	132
7.5 False Positives	133
7.5.1 A Test Step with False Positives	135
7.5.2 Yield of the Bonepile	137

7.6 Multiple Test Steps	137
7.6.1 Cascading Test Steps	138
7.6.2 Parallel Test Steps	138
7.7 Financial Models of Testing	139
7.8 Other Test Economics Topics	140
7.8.1 Wafer Probe (Wafer Sort)	140
7.8.2 Test Throughput	142
7.8.3 Design for Test (DFT)	143
7.8.4 Automated Test Equipment Costs	149
References	150
Bibliography	151
Problems	151
Chapter 8 Diagnosis and Rework	155
8.1 Diagnosis	156
8.2 Rework	158
8.3 Test/Diagnosis/Rework Modeling	159
8.3.1 Single-Pass Rework Example	160
8.3.2 A General Multi-Pass Rework Model	163
8.3.3 Variable Rework Cost and Yield Models	169
8.3.4 Example Test/Diagnosis/Rework Analysis	171
8.4 Rework Cost ($C_{rework\ fixed}$)	177
References	179
Problems	180
Chapter 9 Uncertainty Modeling — Monte Carlo Analysis	183
Uncertainty Modeling	185
9.1 Representing the Uncertainty in Parameters	186
9.2 Monte Carlo Analysis	187
9.2.1 How Does Monte Carlo Work?	188
9.2.2 Random Sampling Values from Known Distributions	190
9.2.3 Triangular Distribution Derivation	192
9.2.4 Random Sampling from a Data Set	193
9.2.5 Implementation Challenges with Monte Carlo Analysis	194
9.3 Sample Size	196
9.4 Example Monte Carlo Analysis	198
9.5 Stratified Sampling (Latin Hypercube)	200
9.5.1 Building a Latin Hypercube Sample (LHS)	201
9.5.2 Comments on LHS	203

9.6 Discussion.....	204
References	205
Bibliography	206
Problems	206
Chapter 10 Learning Curves	209
10.1 Mathematical Models for Learning Curves	210
10.2 Unit Learning Curve Model.....	213
10.3 Cumulative Average Learning Curve Model.....	213
10.4 Marginal Learning Curve Model	214
10.5 Learning Curve Mathematics.....	215
10.5.1 Unit Learning Data from Cumulative Average Learning Curves	215
10.5.2 The Slide Property of Learning Curves.....	217
10.5.3 The Relationship between the Learning Index and the Learning Rate.....	217
10.5.4 The Midpoint Formula	218
10.5.5 Comparing Learning Curves	220
10.6 Determining Learning Curves from Actual Data.....	222
10.6.1 Simple Data.....	223
10.6.2 Block Data.....	224
10.7 Learning Curves for Yield	227
10.7.1 Gruber’s Learning Curve for Yield.....	228
10.7.2 Hilberg’s Learning Curve for Yield	229
10.7.3 Defect Density Learning	231
References	232
Bibliography	233
Problems	234
Part II Life-Cycle Cost Modeling	239
II.1 System Sustainment	241
II.2 Cost Avoidance	244
II.3 Should-Cost.....	245
II.4 Time Value of Money	246
II.4.1 Inflation	248
II.5 Logistics	249
II.6 References.....	249

Chapter 11 Reliability	251
11.1 Product Failure.....	252
11.2 Reliability Basics	255
11.2.1 Failure Distributions.....	256
11.2.2 Exponential Distribution	259
11.2.3 Weibull Distribution.....	260
11.2.4 Conditional Reliability	261
11.3 Qualification and Certification	262
11.4 Cost of Reliability	264
References	265
Bibliography	265
Problems	266
Chapter 12 Sparing	269
Challenges with Spares.....	270
12.1 Calculating the Number of Spares	271
12.1.1 Multi-Unit Spares for Repairable Items	274
12.1.2 Sparing for a Kit of Repairable Items	275
12.1.3 Sparing for Large k	277
12.2 The Cost of Spares.....	278
12.2.1 Spares Cost Example.....	280
12.2.2 Extensions of the Cost Model	281
12.3 Summary and Comments.....	282
References	283
Bibliography	283
Problems	284
Chapter 13 Warranty Cost Analysis	287
How Warranties Impact Cost.....	288
13.1 Types of Warranties.....	291
13.2 Renewal Functions.....	292
13.2.1 The Renewal Function for Constant Failure Rate	295
13.2.2 Asymptotic Approximation of $M(t)$	296
13.3 Simple Warranty Cost Models.....	297
13.3.1 Ordinary (Non-Renewing) Free-Replacement Warranty Cost Model.....	297
13.3.2 Pro-Rata (Non-Renewing) Warranty Cost Model.....	299
13.3.3 Investment of the Warranty Reserve Fund.....	301
13.3.4 Other Warranty Reserve Fund Estimation Models	303

13.4 Two-Dimensional Warranties	303
13.5 Warranty Service Costs — Real Systems	307
References	309
Problems	310
Chapter 14 Burn-In Cost Modeling	313
The Cost Tradeoffs Associated with Burn-In	314
14.1 Burn-In Cost Model	315
14.1.1 Cost of Performing the Burn-In	315
14.1.2 The Value of Burn-In	317
14.2 Example Burn-In Cost Analysis	318
14.3 Effective Manufacturing Cost of Units That Survive Burn-In	321
14.4 Burn-In for Repairable Units	322
14.5 Discussion	322
References	322
Bibliography	323
Problems	323
Chapter 15 Availability	325
15.1 Time-Based Availability Measures	325
15.1.1 Time-Interval-Based Availability Measures	326
15.1.2 Downtime-Based Availability Measures	328
15.1.3 Application-Specific Availability Measures	331
15.2 Maintainability and Maintenance Time	332
15.3 Monte Carlo Time-Based Availability Calculation Example	334
15.4 Markov Availability Models	336
15.5 Spares Demand-Driven Availability	338
15.5.1 Backorders and Supply Availability	339
15.5.2 Erlang-B	341
15.5.3 Materiel Availability	342
15.5.4 Energy-Based Availability	343
15.6 Availability Contracting	344
15.6.1 Product Service Systems (PSS)	346
15.6.2 Power Purchase Agreements (PPAs)	346
15.6.3 Performance-Based Logistics (PBLs)	347
15.6.4 Public-Private Partnerships (PPPs)	347
15.7 Readiness	348
15.8 Discussion	349

References	351
Problems	352
Chapter 16 The Cost Ramifications of Obsolescence	355
Electronic Part Obsolescence.....	357
16.1 Managing Electronic Part Obsolescence.....	358
16.2 Lifetime Buy Costs	359
16.2.1 The Newsvendor Problem.....	361
16.2.2 Application of the Newsvendor Optimization Problem to Electronic Parts	366
16.3 Strategic Management of Obsolescence	368
16.3.1 Porter Design Refresh Model.....	369
16.3.2 MOCA Design Refresh Model.....	373
16.3.3 Material Risk Index (MRI).....	374
16.4 Discussion.....	376
16.4.1 Budgeting/Bidding Support	376
16.4.2 Value of DMSMS Management.....	376
16.4.3 Software Obsolescence	377
16.4.4 Human Skills Obsolescence	377
References	378
Problems	379
Chapter 17 Return on Investment (ROI).....	381
17.1 Definition of ROI.....	381
17.2 Cost Reduction and Cost Savings ROIs.....	383
17.2.1 ROI of a Manufacturing Equipment Replacement.....	383
17.2.2 Technology Adoption ROI.....	385
17.3 Cost Avoidance ROI.....	391
17.4 Stochastic ROI Calculations	396
17.5 Summary.....	398
References	399
Problems	399
Chapter 18 The Cost of Service	403
18.1 Why Estimate the Cost of a Service?.....	404
18.2 An Engineering Service Example	405
18.3 How to Estimate the Cost of an Engineering Service	406
18.4 Application of the Service Costing Approach within an Industrial Company	407

18.5 Bidding for the Service Contract	415
References	416
Problems	416
Chapter 19 Software Development and Support Costs	417
19.1 Software Development Costs	418
19.1.1 The COCOMO Model	419
19.1.2 Function-Point Analysis	422
19.1.3 Object-Point Analysis	426
19.2 Software Support Costs	427
19.3 Discussion	429
References	429
Bibliography	430
Problems	430
Chapter 20 Total Cost of Ownership Examples	433
20.1 The Total Cost of Ownership of Color Printers	433
20.2 Total Cost of Ownership for Electronic Parts	437
20.2.1 Part Total Cost of Ownership Model	438
20.2.2 Example Analyses	443
20.3 Levelized Cost of Energy (LCOE)	446
References	447
Chapter 21 Cost, Benefit and Risk Tradeoffs	449
21.1 Cost-Benefit Analysis (CBA)	449
21.1.1 What is a Benefit?	450
21.1.2 Performing CBA	451
21.1.3 Determining the Value of Human Life	456
21.1.4 Comments on CBA	459
21.2 Modeling the Cost of Risk	460
21.2.1 A Multiple Severity Model for Technology Insertion	461
21.3 Rare Events	465
21.3.1 What is a Rare Event?	466
21.3.2 Unbalanced Misclassification Costs	466
21.3.3 The False Positive Paradox	471
References	473
Bibliography	474
Problems	474

Chapter 22 Real Options Analysis	477
22.1 Discounted Cash Flow (DCF) and Decision Tree Analyses (DTA) ...	477
22.2 Introduction to Real Options.....	480
22.3 Valuation	482
22.3.1 Replicating Portfolio Theory.....	483
22.3.2 Binomial Lattices	485
22.3.3 Risk-Neutral Probabilities and Riskless Rates	490
22.4 Black-Scholes	491
22.4.1 Correlating Black-Scholes to Binomial Lattice.....	494
22.5 Simulation-Based Real Options Example: Maintenance Options.....	495
22.6 Closing Comments.....	499
References	500
Bibliography	500
Problems	501
Appendix A Notation	503
Appendix B Weighted Average Cost of Capital (WACC)	523
B.1 The Weighted Average Cost of Capital (WACC).....	524
B.1.1 Cost of Equity.....	524
B.1.2 Cost of Debt	526
B.1.3 Calculating the WACC.....	526
B.2 Forecasting Future WACC.....	528
B.3 Comments	530
B.3.1 Trade-off Theory	530
B.3.2 Social Opportunity Cost of Capital (SOC)	531
References	531
Problems	531
Appendix C Discrete-Event Simulation (DES)	533
C.1 Events.....	535
C.2 DES Examples	535
C.2.1 A Trivial DES Example.....	536
C.2.2 A Not So Trivial DES Example	537
C.3 Discussion	539
References	540
Bibliography	541
Problems	541
Index	543
